The 8719C network analyzer is an instrument which measures the complex transmission and reflection characteristics of twoport devices in the frequency domain. The 8719C samples the incident signal, separating the transmitted and reflected waves, and then performing ratios that are directly related to the reflection and transmission coefficients of the twoport. Frequency is swept to rapidly obtain amplitude and phase information over a band of frequencies of interest. 8719C network analyzers utilize synthesized frequency sources to provide a known test stimulus that can sweep across a range of frequencies or power levels. 8719C network analyzers also can perform ratioed measurements including phase, which require multiple receivers. The 8719C can provide a wealth of knowledge about a device under test DUT, including its magnitude, phase, and group delay response. Page Count 67 ASSEMBLY POINT Fig. 1 3 HOW TO EJECT THE CASSETTE TAPE If the unit does not operate on condition that tape is inserted into housing ass'y 1 Remove the Holder Worm. Be sure to wind the unwound tape in the state of set horizontally. 4 Rotate Gear Worm Wheel. Restore any missing protective shields. 2. When reinstalling the chassis and its assemblies, be sure to restore all protective devices, including control knobs and compartment covers. 3. Make sure that there are no cabinet openings through which people, particularly children might insert fingers and contact dangerous voltages. Such openings include the spacing between the picture tube and the cabinet mask, excessively wide cabinet ventilation slots, and improperly fitted back covers. If the measured resistance is less than 1.0 megohm or greater than 5.2 megohms, an abnormality exists that must be corrected before the unit is returned to the customer. 4. Leakage Current Hot Check See Fig. 11 Warning Do not use an isolation transformer during this test. Use a leakage current tester or a metering system that complies with American National Standards Institute ANSI C101.1, Leakage Current for Appliances, and Underwriters Laboratories UL Publication UL1410, 59.7. 5. With the unit completely reassembled, plug the AC line cord directly into the power outlet. With the unit. Os AC

switch first in the ON position and then OFF, measure the current between a known earth ground metal water pipe, conduit, etc. and all exposed metal parts, including antennas, handle brackets, metal cabinets, screwheads and control shafts. The current measured should not exceed 0.5 milliamp. Reverse the powerplug prongs in the AC outlet and repeat the test. 6. Xray Limits The picture tube is designed to prohibit Xray emissions.

To ensure continued Xray protection, replace the picture tube only with one that is the same type as the original. Fig. 11 AC Leakage Test 7. Antenna Cold Check With the unit's AC plug disconnected from the AC source, connect an electrical jumper across the two AC prongs. Connect one lead of the ohmmeter to an AC prong. Heed the high voltage limits. These include the Xray protection Specifications Label, and the Product Safety and Xray Warning Note on the service data schematic. 9. Some semiconductor solid state devices are easily damaged by static electricity. Such components are called Electrostatically Sensitive Devices ESDs; examples include integrated circuits and some field effect transistors. The following techniques will reduce the occurrence of component damage caused by static electricity. 10. Immediately before handling any semiconductor components or assemblies, drain the electrostatic charge from your body by touching a known earth ground. Alternatively, wear a discharging wriststrap device. Be sure to remove it prior to applying power this is an electric shock precaution. DEVICE UNDER TEST READING SHOULD NOT BE ABOVE 0.5mA LEAKAGE CURRENT TESTER EARTH GROUND TEST ALL EXPOSED METER SURFACES ALSO TEST WITH PLUG REVERSED USING AC ADAPTER PLUG AS REQUIRED 2WIRE CORD If the high voltage exceeds the specified limits, check each of the special components. 12. Design Alteration Warning Never alter or add to the mechanical or electrical design of this unit. Example Do not add auxiliary audio or video connectors. Such alterations might create a safety hazard. Also, any design changes or additions will void the manufacturer's warranty. 13. Hot Chassis Warning Some TV receiver chassis are electrically connected directly to one conductor of the AC power cord. If an isolation transformer is not used, these units may be safely serviced only if the AC power plug is inserted so that the chassis is connected to the ground side of the AC source.

To confirm that the AC power plug is inserted correctly, do the following Using an AC voltmeter, measure the voltage between the chassis and a known earth ground. If the reading is greater than 1.0V, remove the AC power plug, reverse its polarity and reinsert. Remeasure the voltage between the chassis and ground. 14. Some TV chassis are designed to operate with 85 volts AC between chassis and ground, regardless of the AC plug polarity. Do not apply AC power to the unit or any of its assemblies unless all solidstate heat sinks are correctly installed. 16. Always connect a test instrument's ground lead to the instrument chassis ground before connecting the positive lead; always remove the instrument's ground lead last. 17. Observe the original lead dress, especially near the following areas Antenna wiring, sharp edges, and especially the AC and high voltage power supplies. Always inspect for pinched, out of place, or frayed wiring. Do not change the spacing between components and the printed circuit board. Check the AC power cord for damage. Make sure that leads and components do not touch thermally hot parts. 18. Picture Tube Implosion Warning The picture tube in this receiver employs integral implosion protection. To ensure continued implosion protection, make sure that the replacement picture tube is the same as the original. 19. Do not remove, install or handle the picture tube without first putting on shatterproof goggles equipped with side shields. Never handle the picture tube by its neck. Some online picture tubes are equipped with a permanently attached deflection yoke; do not try to remove such permanently attached yokes from the picture tube. 20. Product Safety Notice Some electrical and mechanical parts have special safety related characteristics which might not be obvious from visual inspection.

These safety features and the protection they give might be lost if the replacement component differs from the original even if the replacement is rated for higher voltage, wattage, etc. Components

that are critical for safety are indicated in the circuit diagram by shading, or . Use replacement components that have the same ratings, especially for flame resistance and dielectric strength specifications. A replacement part that does not have the same safety characteristics as the original might create shock, fire or other hazards. Note Do not use the part number shown on this drawing for ordering. The correct part number is shown in the parts list may be slightly different or amended since this drawing was prepared. Important safety notices Components identified with the mark have the special characteristics for safety. When replacing any of these components. Use only the same type.
